Subject: FAA Ground Control Radio Frequency Change – 121.7

Date: June 5, 2015

Effective June 25, 2015, all aircraft and ground vehicle radio communications to the Air Traffic Control Tower (ATCT) will be transmitted on Ground Frequency 121.7 only.

There will no longer be separate frequencies for East (121.3) and West (121.7) ground movement radio transmissions to ATCT.

All airfield signage has been updated and the airport's airfield Movement Area Driver's Training Program will be updated to reflect the change. This change runs concurrent with the next FAA Airport Facility Directory publication update scheduled for June 25, 2015.

Please post for all pilots and airfield movement area qualified driver personnel.
