

Cincinnati/Northern Kentucky International Airport

Operations Memorandum

To: CVG Airport Airlines

From: Brian Cobb, Director - Customer Services

Subject: Loading Bridges – DC Drive Motors

Date: June 10, 2013

The Loading Bridges located at gates A4, A16, A18 and A22 are all equipped with Direct Current (DC) drive motors. As a result, these motors, and therefore the bridges, will coast for a minimal amount of time to allow the current to dissipate before the brakes can be set. To avoid excessive travel potential, it is recommended to operate these bridges in low speed. The speed is determined by how far the lever is pushed forward.

CAUTION

The coast distance becomes very noticeable at top operating speeds; caution should be exercised.
